

# State Wildlife Action Plans

## What is a wildlife action plan?

Congress asked each state to develop a wildlife action plan, known technically as a comprehensive wildlife conservation strategy. These proactive plans examine the health of wildlife and prescribe actions to conserve wildlife and vital habitat before they become more rare and more costly to protect.

## Who developed the wildlife action plans?

Primary responsibility for wildlife management has always rested with the states, so they have had the formal authority for developing and implementing the wildlife action plans. State fish and wildlife agencies have developed these strategic action plans by working with a broad array of partners, including scientists, sportsmen, conservationists and members of the community. Working together, with input from the public, these diverse coalitions have reached agreement on what needs to be done for the full array of wildlife in every state.

## What do the wildlife action plans look like?

The wildlife action plans are all required to assess the condition of each state's wildlife and habitats, identify the problems they face, and outline the actions that are needed to be conserve them over the long term. By drawing together all of the scientific data, the wildlife action plans identify what needs to be done in each state to conserve wildlife and the natural lands and waters where they live— with benefits for both wildlife and people.

Each wildlife action plan reflects a different set of local issues, management needs, and priorities, so no two look alike. However, the states have been working together and with the U.S. Fish and Wildlife Service to ensure nationwide coordination.

## What kinds of actions are in the wildlife action plans?

The wildlife action plans identify a variety of actions aimed at preventing wildlife from declining

“The State Wildlife Action Plans are cost-effective strategies that will work to conserve the wildlife and natural habitats important to us and many of our family traditions. The implementation of these plans will compliment and reinforce the efforts of all of us here today to make sure our natural resources are preserved for future generations.”

- Rep. Ron Kind (D-3rd-WI).

to the point of becoming endangered. By focusing on conserving the natural lands and clean waters that provide habitat for wildlife, the plans have important benefits for wildlife and people.

In addition to specific conservation projects and actions, the plans describe many ways we can educate the public and private landowners about effective conservation practices.

Finally, the plans also identify the information we need to do to improve our knowledge about what kinds of wildlife are in trouble so we can decide what action to take.

## Action plans with deliverable results

What makes the state wildlife action plans different from other plans that have been drafted over the years? A focus on results for all wildlife in every state. The plans are proactive and address the needs of all wildlife. By outlining the steps that need to be taken now, the action plans can save us money in the long term. Together, they create – for the first time – a nationwide approach to conserving wildlife.

“It is vital that conservation plans bring more people into the effort to protect and enhance our wildlife diversity. For conservation to be effective, we as a nation must find effective solutions through collaboration that will prevent species from becoming endangered.” - Senator Mike Crapo (R-ID).
